Press Release

Surface heating solutions for electric busses

Electric mobility offers efficiency and comfort also in urban mass transit. Chinese bus manufacturers are following this megatrend and have started to invest heavily in new projects with hybrid or electric drives.

PRANG+PARTNER AG – a Division of ZOPPAS INDUSTRIES – in cooperation with AIREX Composite Structures has recently developed a fully integrated surface heating solution for a full electric urban mass transit bus of the YUTONG Group, the world's biggest bus and coach builder.

Next to rolling stock applications, where they have been widely accepted throughout the industry, surface heating solutions similarly provide full structural integration, highest energy efficiency and easy montage.

Low energy consumption, maximum comfort.
